DETAILED ACTION***Claim Rejections - 35 USC § 112***

Claims 1-55 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention, for reasons of record. Applicant argues that the Examiner has not set forth an adequate prima facie case for nonenablement, because the specification contains detailed instructions and because no publication was cited teaching failure to pseudotype a hepadnavirus. However, the previous office action presents sound scientific reasons (the publication by Eastman indicating that gag-env interactions are essential for budding of infectious viruses such as HBV and foamy viruses) why one skilled in the art would not unquestioningly accept the unsupported assertions made in the specification (that foamy virus env can associate with hepadnavirus virions to produce particles which are infectious in vitro). Applicant argues that it was known that foamy virus envelope could be used to pseudotype other types of retroviruses. However, hepadnaviruses are not "other retroviruses", but a distinct virus family. Applicant argues that reduction to practice is not a requirement for enablement. However, in an unpredictable area such as biological activity (and infectiousness requires biological activity), the presence or absence of working examples is a factor in enablement. Considering the state of the art, the lack of a working example, and the unpredictability of success in producing an infectious HBV pseudotype, it is maintained that undue experimentation would be required to make and use the invention as claimed. As indicated

Art Unit: 1648

in the last Office action, this rejection could be obviated by a showing of evidence that the methods taught in the specification actually do produce cell-culture-infectious hepadnavirus. The attorney's argument in the response asserts that inventors have made the "surprising discovery that foamy virus envelope proteins can be used to successfully pseudotype a hepadnavirus such as HBV" (response, pages 4-5); a showing of that asserted success would be sufficient to overcome the rejection.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
